ABOUT ME

A dedicated third-year Computer Science undergraduate at IIT affiliated with the University of Westminster, passionate about building efficient and innovative software solutions. I thrive in collaborative environments and take ownership of my responsibilities. Currently seeking a software engineering internship to apply my technical skills and gain hands-on industry experience.

Database: SQL

Web Technologies: HTML5, CSS3, React.js

Development: Software Development, Web Design

Frameworks: Flutter, Nest JS

- Soft skills

Communication, User-centered Design, Adaptability

PROJECT EXPERIENCE

Safe Lanka Police App (Flutter, Nest JS, MySQL – Mobile Application)

- Developed a cross-platform mobile application to improve communication between citizens and law enforcement authorities.
- Implemented key features such as SOS emergency alerts, crime reporting, complaint tracking, fines management, lost and found, traffic updates, safety tips, and AI chatbot support.
- Built and integrated frontend and backend components using Flutter and NestJS, with MySQL for structured data management.
- Contributed to improving usability by designing and testing user-friendly mobile interfaces for citizen-facing safety services.
- Supported API integration, feature testing, and system validation to ensure smooth interaction between the mobile app and backend services.

OPULENZA Estate Agent Web Application (React, Vite, JavaScript, React Router, Jest – Responsive Web Application)

- Developed a responsive estate agent web application that allows users to search, browse, and view property listings using client-side React functionality.
- Implemented property search filters including property type, minimum and maximum price, bedroom range, date added, and postcode area.
- Built individual property detail pages with image galleries, property descriptions, floor plan tabs, map sections, and clean navigation.
- Implemented favourites functionality, allowing users to add properties, remove selected properties, and clear the favourites list.
- Used client-side JSON data, React Router, reusable components, and responsive CSS to improve usability across desktop and smaller screen sizes.

SmartCampusAPI (Java, JAX-RS, Jersey, Maven, Apache Tomcat, Postman – RESTful API)

- Developed a RESTful Smart Campus management API to manage rooms, sensors, and sensor reading data for a university campus environment.
- Designed resource-based API endpoints for rooms, sensors, and nested sensor readings using JAX-RS and Jersey.
- Implemented API features including room management, sensor registration, sensor filtering, and reading history management.
- Used Java collections as an in-memory data store and structured the application with clear resource separation.

Advanced Python To-do List App (Python, SQLite, CSV – Command-Line Application)

- Built an advanced command-line To-do List application using Python and SQLite for local task management.
- Implemented CRUD functionality to add, view, update, complete, delete, and search tasks.
- Added task descriptions, priority levels, due dates, overdue task tracking, and task statistics.
- Used SQLite to store task data persistently and structured database logic using a dedicated database management class.

ACHIEVEMENTS
